Ph.D at the University of Amsterdam, ILLC

Thesis topic: [Permutation Forests for Modeling Word Order in Machine Translation](#)

Supervisors: Prof. Dr. Khalil Sima'an and Dr. Wilker F. Aziz

Summary: In the thesis I propose representation of MT reordering patterns that is based on recursive factorization of permutations. This recursive process forms a tree-like description of relations between paired sentences. In the first part of the thesis I give an unsupervised generative model that learns these hierarchical representations and show how they improve MT. In the second part I show how these factorizations could be used to also improve MT evaluation.
